

HYDRAULIC LEVELLER **FR**

About the **FR** leveller

The use of a hydraulic planetary drive directly in the sprocket chain wheel makes this the most powerful leveller on the market.

The FR leveller is equipped with a free release so that it can also be used as a snatch block. Hydraulic throttling allows the freewheel speed to be regulated for controlled lifting of the load.

The leveller can also be ordered with a drum for hoisting belt.

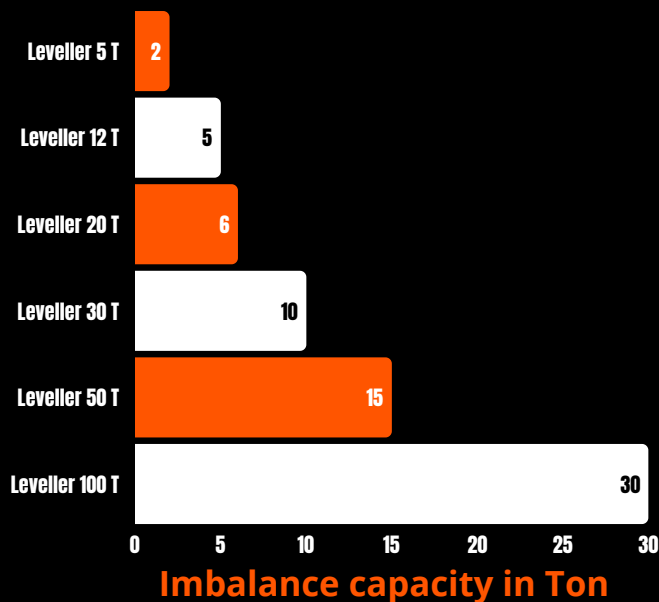

So you can easily tilt objects 360 degrees with an endless hoisting belt.

By cleverly using standard hydraulic components, spare parts are available worldwide in the event of replacement.

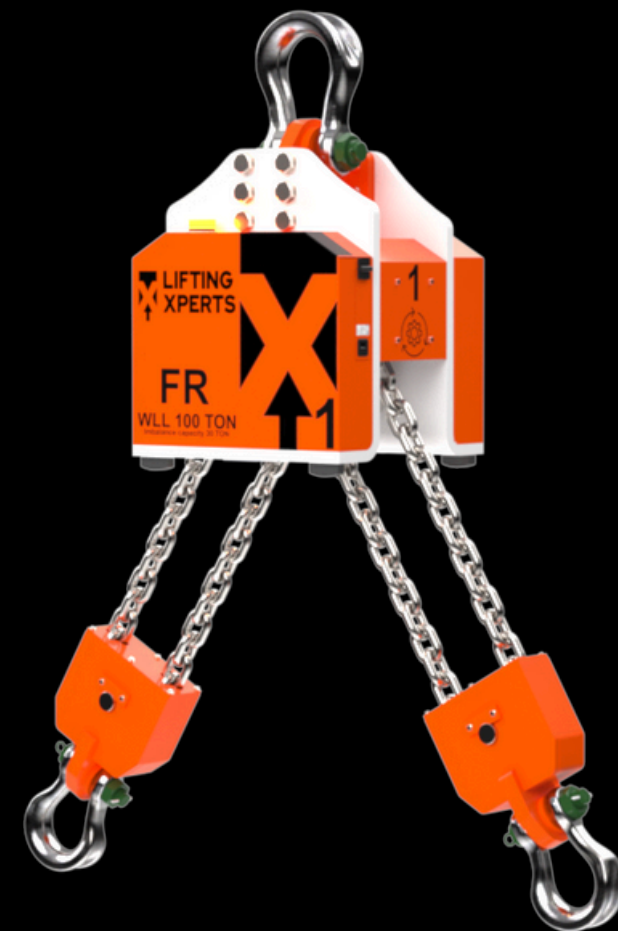

The FR design and the combination of these standard components are registered under number no: 90931-01 at the Office for Intellectual Property

HYDRAULIC LEVELLER **FR**

Features

- Calibrated chain G 80 / standard 6 M
- 12 V or 24 V battery system
- 12 V or 24 V battery charger build in
- Teleradio remote control
- Working lights 2 x 12 V 2000 Lumens
- Finish : Galvanized + RAL powder coated

Options

- Extra battery package
- Chain lenght
- Transport box
- Rain cover
